Motivation

Issue:

- Students often struggle to make meaningful connections and find peers with shared interests, leading to feelings of isolation. The UMass Hangout application addresses this by enabling students to create or join interest-based groups, facilitating flexible social interactions and real-time communication for organizing activities.
-

Solution:

- UMass Hangout provides a platform for students to create or join groups based on shared interests and availability, fostering meaningful connections. The app includes features for event planning, real-time chat, and profile customization, streamlining the process of organizing social activities.

Objective

The objective of the UMass Hangout web application is to create a platform that facilitates student interactions, encourages group activities, and enhances the overall campus experience. By connecting students with shared interests and availability, UMass Hangout aims to foster a sense of community and belonging among UMass students.

High Level Features

Login/Register Functionality:

Secure student authentication and personalized profiles.

Group Creation & Enrollment:

Ability to create, join, and leave groups based on courses, time, and preferences.

Event Scheduling:

Google Calendar integration to schedule and reminds

Search Functionality:

Search for groups, users, or study topics.

Resource Sharing:

Easily share notes, files, and study materials within groups.

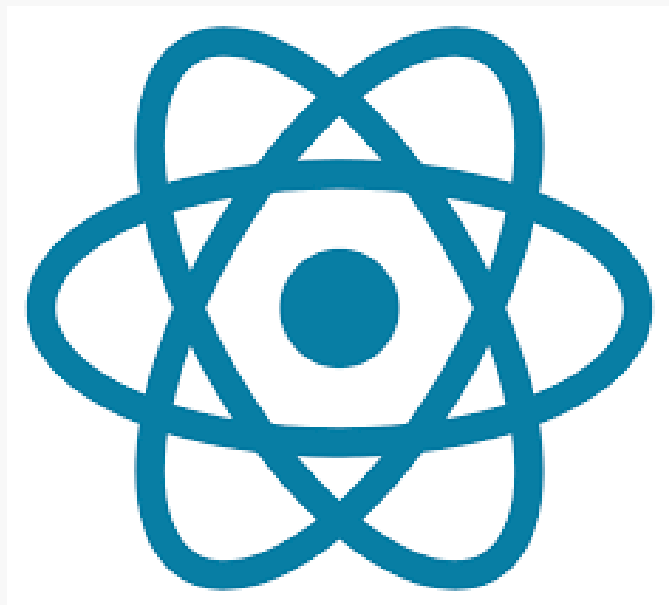

Profile Tags:

Indicate study preferences and styles.

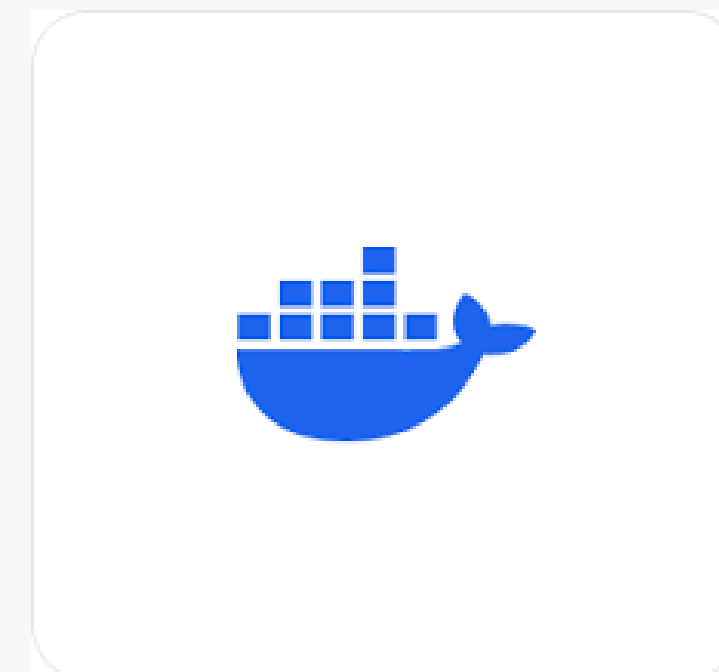

Group Chat:

Real-time chat for group discussions.

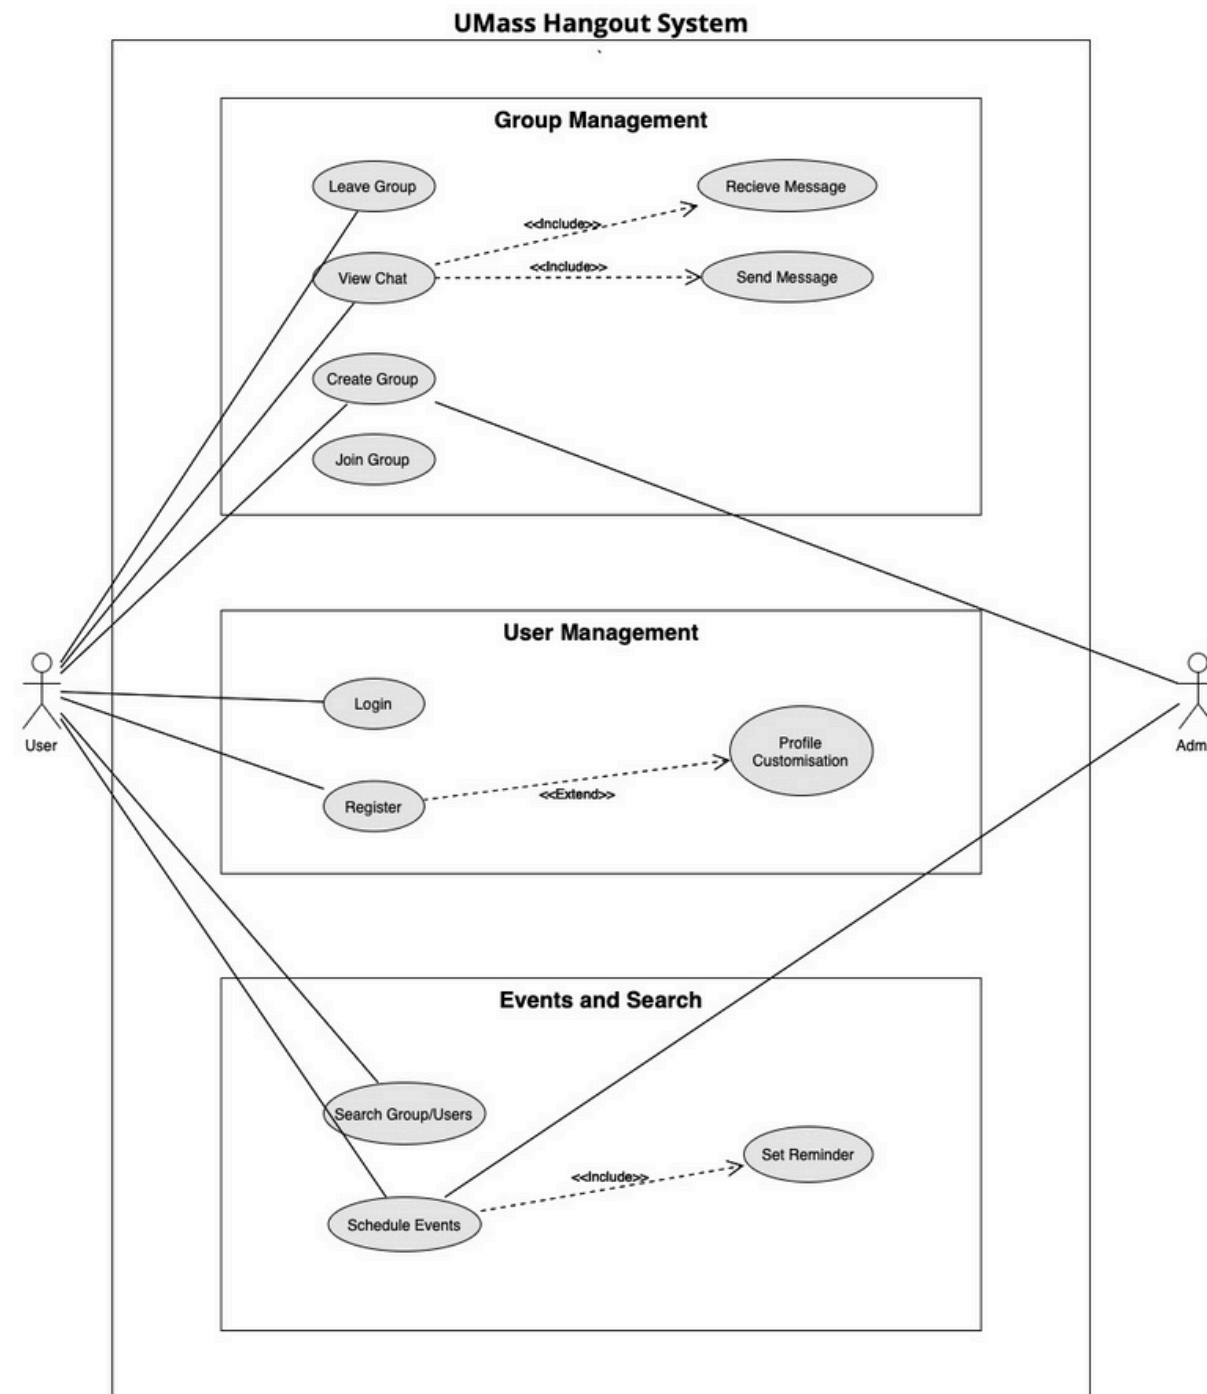

Technologies

Use Case Diagram

Use Case Descriptions

Use Case: New User Sign-up

- User visits the UMass Hangout website
- Clicks on "Sign Up" button
- Enters UMass email and password
- System creates account and logs user in

Use Case: Create Basic Profile

- After first login, user is prompted to complete profile
- User enters name, major, and graduation year
- Optionally adds a brief bio
- System saves profile information

Use Case: Create a Group

- Logged-in user clicks "Create Group" button
- Enters group name and description
- Selects group type (e.g., study, social, sports)
- System creates group and adds user as admin

Use Case: Join Existing Group

- User navigates to "Browse Groups" page
- Views list of available groups
- Clicks "Join" on desired group
- System adds user to group members

Use Case: Create Group Event

- Group admin navigates to group page
- Clicks "Create Event" button
- Enters event title, date, time, and location
- System creates event and displays it on group page

Use Case: Group Chat Interaction

- User opens a group they're a member of
- Views recent chat messages
- Types and sends a message
- Other group members receive the message in real-time

Use Case: Search Functionality

- User clicks on search bar
- Enters keywords (e.g., "Computer Science", "Soccer")
- System displays relevant groups
- User can view group details and join if interested

Thank you
